

Samantha™

The EHR Virtual Assistant

My name is Semi-AutoMous Adaptive Note Transcription Heuristic Algorithm. You can call me Samantha!

Samantha reduces documentation time by up to 50% in Allscripts Professional™ EHR

Samantha is designed to let you work the way you want. From a single screen, you can either type or dictate the entire narrative of the patient encounter, thanks to Samantha's natural language understanding technology. Once the narrative is complete, Samantha goes to work.

Through her proprietary artificial intelligence, Samantha deciphers the structured data from the narrative text, understands the terminology the EHR is expecting, automatically assigns the proper coding, and puts all the data into the EHR, exactly where it needs to be, just as if you had entered it yourself.

Samantha Reduces the Time and Frustration of Entering Patient Notes into the EHR

Simplifying the entire documentation process to a single screen — no wading through layers of menus and clicking around the EHR.

Intelligently identifying structured data from the narrative text — Samantha automatically inputs everything into the correct sections of the EHR, including check boxes and other special formatting.

Eliminating the need to look up codes — Samantha assigns all required codes automatically (ICD10, SNOMED, CPT, etc.) based on the structured elements of your narrative.

Samantha is like having a real-time transcriptionist, but without the costs and delays. She is your scribe, minus the extra person in the examining room. She is your coder, without the cost and overhead.

Samantha saves providers an average of 6-8 hours each week in EHR documentation time, giving them more time to focus on what's most important — providing patient care.

Samantha simplifies and streamlines the EHR note entry process

Samantha does the EHR work for you and lets you work the way you want. Just type or dictate your patient encounter information and Samantha automatically completes:

Reason for Visit
History of Present Illness
Assessment (with Problem List)
Past Medical History
Social History
Current Medications
Review of Systems
Exam
Allergies
Plan (including Orders)

Samantha is easy to deploy and learn

She can be remotely implemented in 15 minutes and you can be trained in less than 2 hours — we will teach you how to use Samantha in your existing workflow and processes so she won't disrupt your routine.

Samantha™

The EHR Virtual Assistant

“Samantha is a game changer for me. The fact that I don’t have to jump from screen to screen and click 100 times has saved me hours entering patient notes.”

Dr. Chris Russell, MD
Peachtree Neurological Clinic & Piedmont
Healthcare — Atlanta, GA

Samantha understands you accurately and intuitively

Samantha is a turnkey solution with her own built-in medical speech recognition capabilities. If you already have your own medical speech recognition, such as Dragon Medical One, you can use that as well. Or, if you prefer typing, you can do that, too.

We recommend using either the Philips SpeechMike Premium Touch (wired) or the Philips SpeechMike Premium Air (wireless) with Samantha.

Samantha learns from you over time

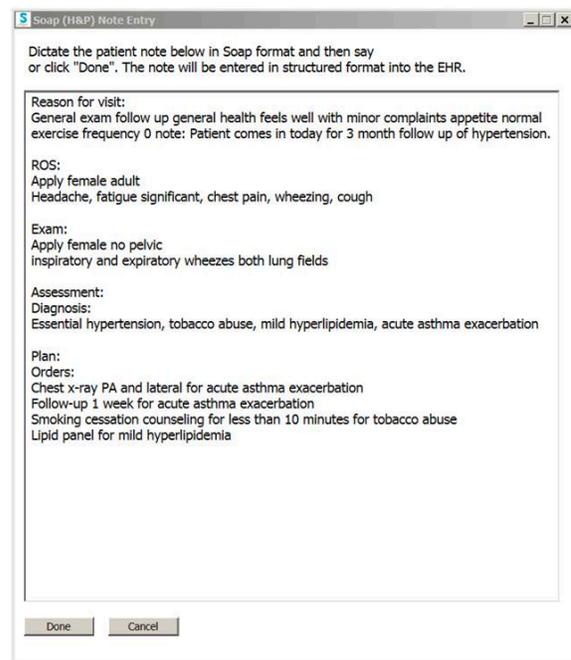

Samantha matches dictated terms with the proper equivalent in the EHR, and detects potential conflicts or ambiguous terms, automatically prompting the user to review and correct any potential conflicts, ensuring maximum accuracy. Samantha also learns from the provider and will improve upon the tasks that the physician most commonly performs over time—just like a transcriptionist, but in real time.

Samantha allows you to enter the entire note from a single screen

Samantha’s Soap Note window allows you document the complete narrative of a patient encounter in a single screen, and Samantha does the rest.

Samantha will help make money for your practice

- Enters billing codes accurately and intuitively, so your claims are submitted faster and denials are drastically reduced.
- Reduces time spent on documentation, giving you more time to follow up on co-morbidities, so patients are better managed.
- Allows you to see more patients each day.
- Eliminates the need to work after hours to complete your documentation.
